CYBOTS

CYBER THREATS DON'T SLEEP. **NEITHER DO WE.**

CASE STUDY

WHEN THERE IS NO ROOM FOR SECURITY GAPS

Rapid security assessment and remediation for critical infrastructure supporting a national event.

CYBOTS
CYBER THREATS DON'T SLEEP. NEITHER DO WE.

SECURING CRITICAL INFRASTRUCTURE

Identifying and addressing cyber risk under extreme time pressure for a high-profile national event.

Client Background

A government entity responsible for managing a major national event required rapid validation of its cybersecurity posture. Such events represent high-value targets, attracting nation-state actors, hacktivists, and cybercriminals aiming to disrupt operations, compromise sensitive data, or undermine public trust.

Industry Context

Globally, national events have become prime targets for coordinated cyberattacks. Threat actors exploit exposed assets, leaked credentials, and misconfigurations to gain access, often weeks or even days before the event. The challenge is not just detection but rapid, decisive response before impact.

The Operational Problem

The organization lacked unified visibility into its external exposure. Unknown assets, potential credential leaks, and misconfigurations created blind spots at a time when zero disruption was critical.

Why Traditional Approaches Failed

Periodic assessments and siloed tools could not provide real-time visibility. Without continuous monitoring and correlation, emerging threats could remain undetected until it was too late.

THE CYBOTS APPROACH:

Cybots deployed a **focused, high-impact assessment** combining:

- External Attack Surface Management (EASM)
- Dark Web Intelligence Monitoring
- Rapid Exposure Risk Assessment

Execution Timeline

Within weeks, Cybots was able to do the following:

MAPPED EXTERNAL ASSETS → IDENTIFIED EXPOSED CREDENTIALS → CORRELATED THREAT INTELLIGENCE

Outcome

The assessment revealed compromised accounts and critical misconfigurations that required immediate action. Cybots provided clear, prioritized remediation steps.

Business Impact

The organization gained rapid visibility and control over its security posture, enabling stakeholders to act decisively. This ensured operational continuity, protected national infrastructure, and reduced the risk of disruption during a high-profile event.
